SUMMARY

Computer Science undergraduate specializing in full-stack MERN development (MongoDB, Express.js, React.js, Node.js). Builds and independently deploys production-grade web applications, from role-based authentication systems to real-time and GraphQL-based platforms. Comfortable owning a project end-to-end: architecture, security hardening, debugging complex deployment issues, and shipping to production on Vercel and Render.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, C, C++, HTML5, CSS3

Frontend: React.js, Vite, Redux, React Router, Tailwind CSS, shadcn/ui, Bootstrap, Framer Motion

Backend: Node.js, Express.js, REST APIs, GraphQL, Socket.io

Databases: MongoDB

Security & Auth: JWT (httpOnly cookies), bcrypt, Helmet, rate limiting, mongo-sanitize, CORS configuration

Tools & Platforms: Git, GitHub, Postman, VS Code, Vercel, Render, Docker (in progress)

PROJECTS

Personal Portfolio Website

[Live Demo](#) 2026

Next.js, React, Responsive Web Design

- Designed and deployed a responsive multi-page portfolio built with Next.js, covering About, Skills, Projects, Experience, and Contact sections.
- Implemented image optimization and clean component-based routing across pages, with a downloadable resume and direct contact/social links.
- Focused on fast load times, mobile-first layout, and a clean, professional presentation of projects and skills.

GreenHub — Renewable Energy Marketplace

[Live Demo](#) 2026

Full-Stack MERN Application — React.js, Node.js, Express.js, MongoDB

- Developed and deployed a MERN-based marketplace connecting users around renewable energy products and services.
- Built a mobile-responsive navbar, cookie consent system, and an OTP-based forgot-password flow.
- Diagnosed and resolved transactional email delivery failures across multiple providers (Gmail SMTP, Resend, Brevo, SendGrid) on free-tier hosting, settling on an HTTP-based email API for reliability.
- Resolved cross-origin (CORS) and environment configuration issues to stabilize the production deployment.

realJobPlatform — Full-Stack Job Platform

[Live Demo](#) 2026

Full-Stack MERN Application — React.js, Node.js, Express.js, MongoDB

- Built and deployed a full-stack job platform with the frontend on Vercel and backend on Render.
- Debugged a persistent cross-origin cookie issue causing users to be logged out on refresh and filter actions.
- Redesigned the auth flow to keep JWTs in httpOnly cookies while storing only non-sensitive user data in localStorage, eliminating the bug.

EDUCATION

Bachelor of Technology in Computer Science and Engineering

Aug 2025 – May 2029

Medi-Caps University | CGPA: 9.38

EXPERIENCE

Independent Full-Stack Developer — Self-Directed Projects

2025 – Present

- Independently designed, built, and deployed multiple full-stack MERN and Next.js applications end-to-end, from architecture through production deployment.
- Debugged and resolved real-world production issues including cross-origin auth failures, email delivery on free-tier hosting, and deployment configuration across Vercel and Render.

CERTIFICATIONS

- Computer Networking — Cisco Networking Academy
